FINANCE (FINC-GB)

FINC-GB 2102 Corporate Finance (1.5 Credits)
Typically offered occasionally
This is an introductory course in corporate finance. The course has three main objectives: 1) Develop an understanding of the tools that are used to value investment projects and companies (valuation). 2) Understand the basic issues involved in how firms should raise funds for their real investments (financing). 3) Evaluate how investment and financing decisions are related. Emphasis will be placed on appreciating the limitations and challenges that are faced when applying the theoretical framework of corporate finance to real world problems.

FINC-GB 2114 Sem Credit Default Swaps (1.5 Credits)
Typically offered occasionally
Credit default swaps (CDS) have grown to be a multi-trillion dollar, globally important, market. The academic literature on CDS has grown tremendously over the last decade, and has been analyzed from different perspectives using diverse research methodologies. This development has raised several controversies and open debates. CDS contracts and markets have become a key research topic among financial economists, and a current discussion focus for several regulatory initiatives. This seminar provides an exposure to the salient contributions in the field. The topics covered will be grouped under the following seven sections (1) CDS Market Structure and Regulation, (2) CDS Pricing, (3) CDS, Bond and Equity Markets, (4) CDS and Corporate Finance, (5) CDS and Financial Intermediaries, (6) Sovereign CDS, (7) CDS Indices. In addition to the papers assigned for presentation and detailed discussion in class, an extensive reading list of other related papers and surveys on each topic are also included.

FINC-GB 2175 Managing Climate, Cyber, Geopolitical, and Financial Risk (1.5 Credits)
Typically offered occasionally
Businesses and governments now face a growing and immediate array of nonfinancial risks, including climate-related, cyber and operational, and geopolitical risks. Precisely because these critical risks are hard to measure and analyze, firms are putting new resources – people and money – to work to anticipate, manage and mitigate them. To address cybersecurity risks, for example, JP Morgan alone has 3000 employees and spends $600 million annually. Firms are only starting to grapple with existential climate-related risks. And startups are mushrooming to provide assessments to businesses. This course will study these risks alongside financial risks. It will outline frameworks for measuring, assessing and analyzing them, and for actions needed to meet them. We will examine case studies of climate, cyber and geopolitical risks, including from current events. Finally, we will study whether and how the information in financial markets can both inform the assessment of these risks and potentially provide tools to transfer, insure against or hedge them.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 2190 Currency Crashes in Emerging Markets (1.5 Credits)
Typically offered occasionally
The six-session course focuses on understanding the causes, dynamics and consequences of notable currency crises that have occurred in Emerging Markets countries over the last three decades. These economies have been particularly susceptible to significant currency volatility over the years, especially as their capital markets have increasingly opened to global investors.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 2202 Corporate Finance (2.5 Credits)
Typically offered occasionally
This course teaches how to make optimal investment and financing decisions. Specific topics include valuation techniques (net present value rule), a discussion of the many shortcomings of the popular internal rate of return rule, real options, extracting cash flows from accounting data, estimating a project's or firm's cost of capital, the choice between debt and equity, and the effect of financing decisions on investment decisions (using the popular "WACC" method).
Grading: Grad Stern Pass/Fail Executive MBA
Repeatable for additional credit: No

FINC-GB 2212 Behavioral Finance Drivers in Stocks, Cryptocurrencies and NFTs (2.5 Credits)
Typically offered occasionally
Finance theory has long relied on a descriptively sparse model of behavior based on the premise that investors and managers are rational at a collective level and that arbitrage frictions are minimal. In recent years both assumptions have been questioned as the standard model, called the Efficient Market Hypothesis (EMH), fails to account for various aspects of actual markets and fluctuations that appear not to be connected to fundamentals. Behavioral finance allows for the condition that investors and managers are not always rational and may make systematic errors of judgment that affect market prices. Behavioral finance has emerged as a credible alternative to the EMH. This course provides an exposition of the insights and implications of behavioral finance theory showing how it can explain otherwise puzzling features of asset prices and corporate finance. Notwithstanding the inroads of the new theory, the EMH retains strong supports amongst many academics (as well as exchange funds, index ETF providers) that make valid criticisms of behavioral finance that deserve serious consideration.
An important challenge that we will address in this course is identifying the respective implicit assumptions of each model and the practical questions for real-world money managers.
Grading: Grad Stern Pass/Fail Executive MBA
Repeatable for additional credit: No

FINC-GB 2225 The Architecture of Global Finance (2.5 Credits)
Typically offered occasionally
This course is about the evolution, current structure, and competitive dynamics of the global financial system – the network of services, geographies and institutions that constitutes the world's financial architecture and plays a major role in determining global economic growth. The course has three parts – (1) a historical perspective on how the global financial system has evolved to create what we now have, (2) an overview of the principal global financial functions; global lending, debt and equity capital markets and market making, mergers and acquisitions advisory, and (3) a description of the current conditions that exist in key markets; the US, Europe, Asia, and the Emerging Markets. Throughout, there will be a focus on the competitive performance of the global, systemically important banks, and other major financial intermediaries, as well as the risks to which they are exposed and the challenges that they face.
Grading: Grad Stern Pass/Fail Executive MBA
Repeatable for additional credit: No

FINC-GB 2229 Real Estate Primary Mktgs (2.5 Credits)
Typically offered occasionally
The Real Estate Primary Markets course provides MBA students an accelerated introduction to real estate investment analysis and decision-making in direct assets within the context of the U.S. markets.

<tr>
<td>FINC-GB 2234</td>
<td>Financial Service Industry</td>
<td>(2.5 Credits)</td>
<td>Typically offered occasionally</td>
<td>Grad Stern Pass/Fail Executive MBA</td>
<td>No</td>
<td>The financial services industry touches all of our lives and has been going through a continuous transformation since the deregulation that began in the early 1970s. That evolution has accelerated in recent years as more and more pressure has been brought to bear by various stakeholders in the industry who have divergent goals and agendas. Those invested stakeholders include clients, investors, employees, regulators/politicians and the public at large. Overplaying all of this change has been rapid technological advancement that has had a direct impact on how the industry delivers its services, meets expected equity returns and manages the risk inherent in that delivery. This Course is an Advanced Finance Elective where THINKING not MEMORIZING is what it is all about.</td>

<td>FINC-GB 2239</td>
<td>Real Estate Capital Markets</td>
<td>(2.5 Credits)</td>
<td>Typically offered occasionally</td>
<td>Grad Stern Pass/Fail Executive MBA</td>
<td>No</td>
<td>The purpose of this course is to provide the student with a comprehensive understanding of both theory and practice in residential and commercial real estate debt and equity capital markets. These markets finance approximately two thirds of all residential debt in the US and about one quarter of all commercial real estate debt. They are also at the heart of the past real estate bubble, collapse and ensuing lackluster performance in the US economy. We will also discuss their role in the current re-inflation of residential and commercial real estate assets. The approach will be to make sure students first have a thorough grasp of the relevant theories and models used to value these assets and then to critique the limitations of these theories. As a final project, students will be grouped into teams and given residential and commercial real estate securities to analyze on a Bloomberg to make investment decisions.</td>
</tr>
<tr>
<td>FINC-GB 2240</td>
<td>Turnaround, Restructuring &amp; Distressed Investments</td>
<td>(2.5 Credits)</td>
<td>Typically offered occasionally</td>
<td>Grad Stern Pass/Fail Executive MBA</td>
<td>No</td>
<td>This course provides turnaround, restructuring, and distressed investing skills that will expose you to, and prepare you for, careers in the industry. The focus is primarily on corporate reorganizations ranging from small/mid-size businesses to large corporations, including real estate and municipal turnarounds. Topics will include the identification of distressed opportunities; distressed research analysis; and the sourcing of distressed opportunities in the US, Europe, Latin America and Asia. We will also discuss workout strategies; the fundamentals of bankruptcy and the bankruptcy-reorganization process; and career opportunities in the distressed investment business. The class will culminate with students selecting a turnaround investment idea and presenting it to the class for consideration.</td>

<td>Real Estate Investment Strategy</td>
<td>(2.5 Credits)</td>
<td>Typically offered occasionally</td>
<td>Grad Stern Pass/Fail Executive MBA</td>
<td>No</td>
<td>This accelerated course focuses on institutional real estate investment, primarily within the U.S. market. It covers real estate property level valuation and risk analysis in the context of four group cases spanning industrial, office, retail and multi-family development. These projects allow graduated skill development over the span of the course, an opportunity to apply financial and property market analysis, hone investment presentation skills, and develop skills and techniques to be an effective investment committee decision-maker. Depending on the level of prior student experience, the presenting “deal team” groups can focus on topics ranging from core market supply / demand forecasting, return sensitivity analysis, debt/equity optimization and/or sponsor/investor deal structuring features. While primarily relevant to those in the real estate equity and debt investment arena, skills and concepts are relevant across investment sectors. Prior real estate investment experience is not required.</td>
</tr>
<tr>
<td>FINC-GB 2242</td>
<td>Investments</td>
<td>(2.5 Credits)</td>
<td>Typically offered occasionally</td>
<td>Grad Stern Pass/Fail Executive MBA</td>
<td>No</td>
<td>This course is about financial markets and how financial assets (securities) are valued, used, and traded. The three main types of financial asset are considered in turn: equity (with a focus on portfolio management); debt (both Treasury and corporate); and, derivatives (call and put options and forward and futures contracts). For each type of financial asset, the course answers four questions: What is the payoff from holding the asset? Where and how is the asset traded? How is the asset valued? How is the asset used? The course introduces and expands upon several important theories for valuing assets: the CAPM and Intertemporal-CAPM for equity and corporate debt (including the Fama-French 3-factor asset pricing model); no-arbitrage pricing for Treasury debt instruments; the Black-Scholes option pricing model; and, forward-spot parity for forward contracts. Important finance researchers (Fama, Markowitz, Merton, Scholes, and Sharpe) have won Nobel prizes for developing many of the models that the course examines.</td>
</tr>
<tr>
<td>FINC-GB 2261</td>
<td>Entrepreneurial Finance</td>
<td>(2.5 Credits)</td>
<td>Typically offered occasionally</td>
<td>Grad Stern Pass/Fail Executive MBA</td>
<td>No</td>
<td>This course identifies and follows the wealth creation cycle that begins with company startups passes through successive stages of various kinds of private equity financing and ends with the harvesting of the created wealth through a sale or merger or initial public offering. Emphasis is placed on how entrepreneurial firms adapt financing and financial contracts to the information asymmetry problems the high degree of uncertainty and the conflicts of interest associated with startups.</td>

FINC-GB 2275 Managing Climate, Cyber, Geopolitical, and Financial Risk: An Integrated Approach (2.5 Credits)
Typically offered occasionally
Businesses and governments now face a growing and immediate array of nonfinancial risks, including climate-related, cyber and operational, geopolitical, and pandemic risks. Precisely because these critical risks are hard to measure and analyze, firms are putting both new and old resources — AI, data, people and money — to work to anticipate, manage and mitigate them. To address cybersecurity risks, for example, JP Morgan alone has 3000 employees and spends $600 million annually. Firms are only starting to grapple with existential climate-related and other risks. And startups are mushrooming to provide assessments to businesses. This course will study these risks alongside financial risks. It will outline frameworks for measuring, assessing and analyzing them, and for actions needed to meet them. We will examine case studies of climate, cyber, geopolitical and pandemic risks, including from current events. We will assess the spillovers among these risks, and why an integrated (e.g. enterprise-wide or system-wide) approach helps to manage them. Finally, we will study whether and how the information in financial markets can both inform the assessment of these risks and potentially provide tools to transfer, insure against or hedge them.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 2302 Corporate Finance (3 Credits)
Typically offered occasionally
This course helps students develop an analytical framework for understanding how organizations make investment and financing decisions. Students also learn the theory and practice of various valuation techniques. There is an emphasis on understanding the theory and its applications to the real world as well as appreciating the limitations of the tools in practical settings. Specific topics include capital budgeting investment decision rules discounted cash flow valuation real options cost of capital capital structure dividend policy and valuation methods such as WACC and APV.
Grading: Grad Stern Graded
Repeatable for additional credit: No
Prerequisites: COR1-GB 2311 and FINC-GB 2302.

FINC-GB 2304 Restructuring Firms and Industries (3 Credits)
Typically offered occasionally
This course presents a comprehensive analysis of asset and liability restructuring topics include industrial organization economics mergers and acquisitions divestitures corporate recapitalization bankruptcy and reorganization in and out of court workouts legal political and tax impacts on industries and multinational competition Agency theory issues and corporate governance are also considered.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 2309 Seminar in Empirical Household Finance (3 Credits)
Typically offered occasionally
This 14-week, 3-credit PhD course presents research topics in the growing area of Household and Consumer Finance. Each week, we will read a number of a papers in one area of research within household finance. Most of the papers will be empirical, and in many weeks our discussions will focus on how the papers we read use various empirical strategies (instrumental variables estimation, differences-in-differences estimation, regression discontinuity estimation, field experiment) to identify causal effects. The topics are chosen to give students a broad overview of the types of topics under the "household finance" umbrella, and to introduce them both to seminal and to current research papers in the area.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 2310 Managing Financial Businesses (3 Credits)
Typically offered occasionally
This course looks at the management of financial service organizations during periods of rapid regulatory cultural and technical change. The focus is on issues as perceived by top executives. Particular industries and firms are selected for case study exploration. Three main themes are examined: 1) strategy and its execution; 2) managing culture; and 3) managing technology. Classes are a combination of lectures, case studies, and outside speakers.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 2313 Financial History of the US: From the Panic of 1907 to Silicon Valley Bank (3 Credits)
The goal of this course is for students to understand how history, i.e., people and events of the past, have shaped the present-day financial system in the United States, which encompasses its markets, institutions, and regulatory frameworks.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 2328 Real Estate Data Science, Artificial Intelligence, and Machine Learning (3 Credits)
Typically offered occasionally
Exponential growth in the availability of high quality real estate and real estate-related data is fueling a major shift in development, investment, and lending decision-making processes. In this highly applied course, students will be introduced to major data analysis and machine learning platforms; a wide range of public and private real estate and urban data sources; approaches to exploratory data analysis, real estate data visualization, and communication of findings; applied statistical modeling, including forecast modeling; and, emerging and prospective real estate applications for artificial intelligence and machine learning. Assessment will include case work focusing on real-world real estate decisions and coding assignments. While the data and applications for this course are principally in the real estate sector, the applied skills learned may be of interest to students across a wide range of industries.
Grading: Grad Stern Graded
Repeatable for additional credit: No
FINC-GB 2329 Real Estate Primary Markets (3 Credits) Typically offered occasionally
This course is designed for students who have little or no prior knowledge of real estate. Different aspects of real estate analysis are covered including finance taxation appraisal investment analysis development and property management. A central focus is on the risk and return elements in commercial real estate financing and on how to modify the principles of corporate finance and investment theory to fit the specialized needs of real estate analysis. Topics include liquidity problems, buyer or seller informational asymmetries, and interrelatedness of financing and investment decisions. The growing role of international considerations and the importance of securitized instruments and the changing roles of brokers are considered.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 2330 Financial Research Topics (3 Credits) Typically offered occasionally
This course focuses on recent research in finance. Faculty and students select recently published research or working papers from the Department of Finance seminar series or faculty or student work in progress for intensive review and discussion.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 2331 Financial Theory I (3 Credits) Typically offered occasionally
This is the first course in the theory of financial decision making. Focus is primarily on individual decision making under certainty and uncertainty. Topics include valuation theory, asset selection, general portfolio theory, asset pricing theory, and general equilibrium in financial markets.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 2332 Financial Theory II (3 Credits) Typically offered occasionally
This is the second course in the theory of financial decision making. Focus is primarily on methods of empirical financial economics. Standard econometric procedures and the newest techniques in estimating procedures are studied in the context of applications to financial asset pricing and corporate finance issues.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 2333 Financial Theory III (3 Credits) Typically offered occasionally
This is the third course in the theory of financial decision making. The first half of this course deals with issues in corporate finance. Topics include agency theory, signaling and asymmetric information models, taxes, dividends, and capital structure. The second half of the course focuses on the pricing of options, futures, and other derivative securities instruments.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 2334 The Financial Services Industry (3 Credits) Typically offered occasionally
This course presents a broad overview of the role of investment banking in modern societies. Focus is on how these tasks are carried out in competitive and non-competitive environments. Topics covered include concepts such as origination, syndication, distribution of security issues, pricing of new issues, and the management of issues in the after markets and the role of investment bankers in restructuring industry financing governments and facilitating saving and investment. Ethical issues and investment bankers must face are considered.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 2339 Real Estate Capital Markets (3 Credits) Typically offered occasionally
This course covers debt and equity secondary markets linked to real estate. On the debt side we cover the securitization of residential and commercial mortgages and various types of fixed income instruments such as pass-through securities, CMOs, IOs, POs, CDOs, etc. We study the basics of modeling prepayment and default risk on these instruments. We also discuss causes and consequences of the 2008 and ongoing financial crisis and implications of the crisis for the mortgage finance system. On the equity side, we study the legal foundations, financial analysis, and structuring of Real Estate Investment Trusts (REITs) which are the primary traded equity structure used for real estate. The course will be a mix of formal lectures, in-class exercises, and guest lectures from Wall Street professionals.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 2341 Real Estate Investment Strategy (3 Credits) Typically offered occasionally
This course is designed to expose students to a wide range of investment philosophies in the special context of real estate investing. Each week leading professionals or academics speak on a particular approach to real estate investing. Focus is on how it is put into practice and the extent to which it is successful.
Grading: Grad Stern Graded
Repeatable for additional credit: No
FINC-GB 2344 Global Real Estate Immersion (3 Credits)  
Typically offered occasionally  
While commercial real estate development, asset management, and the legal and tax framework of investment and lending remain inherently local features of a worldwide sector valued at more than $300 trillion, institutional real estate equity and debt capital flows have become increasingly global over the last several decades. For students seeking careers in the institutional real estate industry in New York and other global cities, interaction with cross-border investors, lenders, property technology entrepreneurs, and others will be the norm rather than the exception. This course introduces students to real estate finance and investment analysis in non-US settings, special issues when deploying equity and debt capital internationally, and approaches to analyzing global real estate portfolios. The highly experiential course is structured around direct interaction with global real estate developers, investors, lenders, and policymakers in a major non-US market, supplemented by pre-departure meetings in December and January, local site visits, and case-based deliverables.  
Grading: Grad Stern Graded  
Repeatable for additional credit: Yes

FINC-GB 2345 Cases in Financial Management (3 Credits)  
Typically offered occasionally  
This course will use the case method to study the practical aspects of important topics in corporate finance. We will apply some of the concepts and techniques learned in intro Finance classes to actual situations in addition to analyzing the specific financing problems or issues we will consider how those issues relate to the strategic objectives of the firm. It will be important to examine the big picture assumptions that are used in the numerical calculations. Overall, this course represents a strong mix of the quantitative and the qualitative. This course also places a strong emphasis on presentation and discussion skills. It will be important to explain your positions or arguments to each other and try to argue for the implementation of your recommendations.

FINC-GB 2350 Alternative Investments I: Principles and Strategies (3 Credits)  
Typically offered occasionally  
This course provides both a theoretical and practical look into the world of managing alternative investments in particular hedge funds. The course is however organized from the perspective of an asset manager, e.g., pension fund, endowment, family office, fund of funds, etc. having to choose amongst a cross-section of hedge funds. The long-term goal of the course is for students to put an endowment money to work. In order to do this, students need to understand how classic hedge fund strategies are executed and how to evaluate these strategies as well as new ones how to manage risk and how to perform due diligence on firms performing these strategies. The course intends to teach students in all of these areas. While the class is designed as a yearlong full-credit 6 units course, it is possible for students to choose just the fall semester course, but not visa versa with respect to the spring semester. Students start from the beginning and are educated about the hedge fund sector, the building blocks of hedge fund strategies, and all the elements underlying due diligence. For the latter, students will have access to a proprietary software program Focus Vidrio that helps them work through and understand the due diligence process. Quickly, the students move onto specific hedge fund strategies and are provided a combination of lectures and outside industry speakers. This part of the course covers a significant portion of the fall semester. After learning about the various strategies and evaluation techniques, students will form groups and focus on one particular subsector. The groups will collect data, evaluate the funds in this subsector and narrow themselves down to a meaningful list for further evaluation and due diligence. Throughout the semester, students are learning about hedge fund strategies, students will also be learning in a complementary way about due diligence taking practical examples related to each strategy using the software.  
Grading: Grad Stern Graded  
Repeatable for additional credit: No

FINC-GB 2351 Alternative Investments II: Practice and Application (3 Credits)  
Typically offered occasionally  
This is the second half of the two-semester sequence on Alternative Investments. This course is designed to offer students practical hands-on experience. After completing the first semester, teams of students will be assigned a strategy and a supervisor at FocusVidrio. Specific login templates will be created by FocusVidrio for the students and each one will be assigned a login/password to access the platform. Training will be provided on the platform and teams will then have to select a manager within their assigned strategy. A due diligence process will then be triggered on the selected managers, and the students will be responsible for completing all steps in the process. Included in the exercise are the following: Onsite visits to managers’ offices, Manager presentations, etc. Due diligence strategy analysis organization analysis operation due diligence meetings with the portfolio manager risk manager, compliance officer, and CFO. Prime broker conference. The class will participate in a hedge fund conference where they will have the opportunity to meet a large number of managers and hedge fund investors. Fund of funds family offices, pension funds, and presentation of their work. Outside speakers include hedge fund managers, asset allocators, family office pension fund, and fund of and due diligence.  
Grading: Grad Stern Graded  
Repeatable for additional credit: No
FINC-GB 2360  Sustainable Finance: Innovation and Trends in Capital Markets (3 Credits)
Typically offered occasionally
The goal of the course is to analyze the interplay of Sustainability and Finance and the related new risks and opportunities. In fact, the intersection of ESG and Financial issues generates new risks over longer risk horizons, which should be factored into company valuation frameworks from fundamental analysis. However, understanding, measuring, and pricing these new sources of risk, and also assessing the related opportunities, presents challenges due to the wide breadth of ESG-related issues coupled with data limitations.

FINC-GB 2376  Fincng/Invstg Pension VHC (3 Credits)
Typically offered occasionally
Application of Finance and Portfolio Theory to Financing Retirement covers the three Pillars of Retirement 1 Social Security and Medicare 2 employer sponsored plans defined benefit hybrid and defined contribution and 3 personal and family plans IRAs HSAs and Long Term Care policies. Over trillion is now invested in a variety of US pension vehicles with complex finance and portfolio management issues confronting the government corporations and individuals. All are explored at an analytical and practical level in this course. Knowledge of formal financial theory and portfolio management is desirable but not required.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 2382  Global Value Investing (3 Credits)
Typically offered occasionally
This course is designed to offer a thorough understanding of Value Investing principles and techniques from the perspective of professional practitioners. The course aims to prepare students to understand, evaluate, and invest using a Global Value Investment Philosophy in all asset classes (i.e. Securities, Real Estate, and Hard Assets). Students will be exposed to Value Investment Valuation methods, strategies and techniques. The course will feature a combination of lectures by the professor and guest speakers who are expert in different facets of the Value Investing paradigm. An important part of the course is a term project for each student to prepare an investment analysis and oral presentation (or pitch) to a panel of investment professionals. The top investment ideas from the class will be purchased in a real money endowment fund held by Stern. Once investments are ongoing, the class will also be responsible for evaluating past performance and updating past buy decisions to determine whether these holdings continue to meet Value Investing principles and should remain as a holding in the Fund.

FINC-GB 3105 Volatility (1.5 Credits)
Typically offered occasionally
The most fascinating aspect of financial market prices is their volatility. Students will learn how to measure and forecast financial volatility. They will become proficient with ARCH/GARCH models, exponential smoothing and historical volatilities. These tools will be used to measure risk and analyze alternative approaches to calculating Value at Risk. Implied volatilities from options will be introduced and compared statistically and economically. Then the course will turn to the multiasset problem and discuss traditional and new approaches to measuring and forecasting correlations. These tools will be applied to the problem of dynamic portfolio selection and risk control.

Repeatable for additional credit: No

FINC-GB 3129 Behavioral and Experimental Finance (1.5 Credits)
Typically offered occasionally
Finance theory has long relied on a descriptively sparse model of behavior based on the premise that investors and managers are rational. Another critical assumption is that misjudgments by investors and managers are penalized swiftly in competitive markets. In recent years both assumptions have been questioned as the standard model fails to account for various aspects of actual markets. Behavioral finance which allows that investors and managers are not always rational and may make systematic errors of judgment that affect market prices has emerged as a credible alternative to the standard model. This course provides an exposition of the insights and implications of behavioral finance theory showing how it can explain otherwise puzzling features of asset prices and corporate finance. Notwithstanding the inroads of the new theory the standard model retains strong support amongst many academics practitioners who make criticisms of behavioral finance that deserve serious consideration. An important challenge that we will address in this course is identifying the respective domains of each perspective and whether there are tradable opportunities.

FINC-GB 3146 Activist Investing (1.5 Credits)
Typically offered occasionally
This course will explore the world of activist investing. The first half will explore significant historical cases and the second half will have you working on live campaigns, each of which contains a unique set of circumstances and lessons to be learned. We will look through the lens of the investors in each campaign, identifying the opportunity that they saw and how they went about enacting change. Throughout the term, we will focus on the key aspects of activist investing including: identifying different reasons for underperformance, the most common requests of activist investors, and the tactics used to achieve their goals.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 3147 Climate Finance: An Economic and Financial Approach to Climate Change (1.5 Credits)
Typically offered occasionally
This class will examine the science and economics of climate change. We rely heavily on financial models to understand the linkages between the risk of climate change which may become manifest over the very long term and the behavior of today's stock market, as well as how various economic policies might impact climate change (and then reflected in current asset prices), and how agents might use asset allocation choices or financial contracts to hedge their exposure to climate change risk.
The course divides naturally into several major themes — the science of climate change, the economics of climate change, policy responses to climate change, portfolio choices and tools to mitigate climate risks. Common economic examples of externalities and regulation will be used to frame the analysis. From this point of view, portfolio choices and asset prices will be examined. The short run and long run costs of divesting fossil fuel stocks will be considered. Discount rates play a key role and will be discussed in detail. Students will be required to prepare a write-up for one article from each week's required readings. The course may include invited speakers and short videos. A short quiz, a final exam and class participation are also inputs to the final grade.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 3148 Social Venture Capital (1.5 Credits)
Typically offered occasionally
This course explores a spectrum of financial tools used to create social value as well as financial value. Traditional financial instruments are ultimately judged by their bottom line the financial returns they produce. This course examines financial instruments designed to produce not only financial returns but also social returns. These instruments are commonly known as double bottom line investments. Such financial instruments exist on a spectrum from grants where no financial return is contemplated to market or near market rate investments that have positive social impact. In between are program related investments and socially motivated loans. Special purpose financial institutions called community development venture capital investments and socially motivated loans. Specific purpose financial institutions called community development financial institutions have emerged that use a range of investments to achieve social goals. The course will examine the structures and social missions of these institutions. It will also look at the role of various actors such as foundations and government in fostering such activity. In addition the course will consider the challenges of measuring and quantifying social returns produced by double bottom line investments.

FINC-GB 3180 Topics in Cryptocurrency Investing (1.5 Credits)
Typically offered occasionally
A cryptocurrency is an emerging asset class representing the intersection of disruptive early stage technology, liquid capital markets and new use cases and business models. This class focuses on understanding the investment implications of the cryptocurrencies being created at this intersection point. As of December 2017, over 1000 tokens were listed on exchanges throughout the world with Bitcoin and Ether being the two largest in market capitalization terms. The total capitalization of cryptocurrencies expanded by more than a factor of 10 in 2017. This in turn has led to expanded media coverage and debate concerning cryptocurrency's role and value to society. The academic objectives of this course are threefold. (1) To explore the fundamental aspects of cryptocurrencies and the liquid markets they operate in (2) To test select psychological biases/heuristics associated with these cryptocurrencies and the regulatory dynamics overlaid on it and (3) To discuss practical implications of investing in these cryptocurrencies from limits to arbitrage to portfolio impacts across a range of asset classes.

FINC-GB 3181 Arbitrage Trading Strategies (1.5 Credits)
Typically offered occasionally
Advanced professional strategies for managing portfolios and evaluating financial instruments are examined. Topics range from arbitrage trading strategies to contrarian investing to issues in public pension fund management. Taught by leading Wall Street professionals and senior faculty members.
Grading: Grad Stern Graded
Repeatable for additional credit: No
FINC-GB 3182 Global Value Investing (1.5 Credits)
Typically offered occasionally
This course will prepare students to understand, evaluate, and invest using a global value investment philosophy across all asset classes (i.e. securities, real estate, and hard assets). Students will be exposed to value investment valuation methods, strategies and techniques. The course will use a combination of lectures, reading assignments, and guest lectures.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 3186 Project Finance and Infrastructure Investment (1.5 Credits)
Typically offered occasionally
Project finance is used to finance billions of dollars of capital intensive projects annually. This increasingly critical financial technique relies on the cash flows of a specific project not the cash flows of a corporation or third party guarantor to service debt and provide investor returns. Not all projects can support project financing. Project finance is a specialized financial tool requiring both proper structuring and risk mitigation. The purpose of the course is to understand what project finance is why it is used and how it is used. Students will learn what the necessary elements are that support the use of project finance to include contractual agreements technology sponsors risk identification and mitigation sources of capital financial structuring the use of financial modeling accounting considerations and tax considerations.

STRUCTURED FINANCE
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 3229 Behavioral Finance (2.5 Credits)
Typically offered occasionally
The field of Finance has traditionally made assumptions of human rationality in decision making in order to facilitate modeling. It has been a great success that has developed powerful Nobel prize-winning theories that are quite consistent with observation—contributions such as portfolio theory, option-pricing, valuation, agency and signaling among others. These contributions have gone on to revolutionize the practice of both investment and corporate finance. However, there remain many anomalies that these traditional models struggle to explain; such as, various anomalies in the price of assets (e.g., why low P/E firms outperform the high ones), the wide swings in stock prices—say relative to the more stable dividends shareholders receive, and why managers attempt to keep earnings stable through Earnings Per Share (EPS) manipulation. The field of Behavioral Finance has put forth explanations for these anomalies and others by relaxing the assumption of the completely rational, disciplined and selfish human. In this course, we define the traditional finance’s decision-maker as having three traits: (1) he is only interested in maximizing his own welfare; (2) his models for determining his utility as a function of his actions follow perfect mathematical logic; and (3) the cool, calm and collected decision-maker takes actions without emotional bias. We will find that there are substantial violations of each of these—what behavioral economists call bounded self-interest, bounded rationality and bounded will-power. Thus, humans being aware of them can help themselves in their everyday life as well as in finance, and that they might shed light on some of the anomalies that Traditional Finance have had a hard time explaining.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 3231 Valuation (2.5 Credits)
Typically offered occasionally
This course covers a broad range of issues in corporate financial management. We analyze the core financial decisions made by firms, the investment decision and the financing decision, and examine their impact on the value of the firm in the financial market. Topics that will be covered are: financial planning and forecasting, project analysis and evaluation, resource allocation within firms, valuing flexibility in investment projects, capital structure policy and cost of capital, payout policy, corporate restructurings and firm valuation. A large emphasis will be placed on the application of the concepts and tools developed in the course to financial decisions made by firms through case analysis and real-world examples. By the end of the course, participants should feel comfortable performing a sound analysis of a variety of corporate decisions, and should have developed a thorough understanding of how analyzing strategic and financial decisions from the perspective of value creation can improve managerial decision-making.

FINC-GB 3287 Global Bkng & Cap Mkts (2 Credits)
Typically offered occasionally
This course addresses modern wholesale banking, i.e., the activities of large universal and investment banks which today offer a relatively consistent products and services in markets all around the world. It does not focus on retail or consumer banking except peripherally – for example, accessing local banking markets via foreign direct investment in acquisitions, joint ventures or green-field projects.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 3296 Mergers & Acquisitions (2.5 Credits)
Typically offered occasionally
This course is designed to take an interdisciplinary approach to understanding the problems of formulating and implementing successful acquisition strategies. Our major objectives are (1) to enable you to act as a senior advisor to your CEO regarding strategic M&A and shareholder value issues your division or company might confront and (2) to assist you in becoming an informed consumer of just about anything written on M&A success (including pitches by professional services providers). We will introduce a framework for thinking about acquisitions as a strategic investment where the bottom line is superior shareholder performance. The course will approach acquisitions as a multi-step strategic and organizational process drawing from the fields of strategy, negotiations, finance and organizational behavior.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 3305 Topics in Credit Risk: Nexus Between Sovereign and Financial Sector (3 Credits)
Typically offered occasionally
The objective of the course is to provide an introduction as well as an in-depth understanding of issues in credit risk its modelling and analysis and credit related instruments such as default-prone debt and credit derivatives. The objective is to provide a balance between developing on one hand a sound conceptual framework and on the other market understanding and insight. We regard both as essential to the informed practitioner.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 3306 Credit Risk & Bankruptcy (3 Credits)
Typically offered occasionally
The objective of the course is to provide an introduction as well as an in-depth understanding of single-name derivative products, primarily the single-name credit default swaps (CDS), as also index products, with a focus on sovereign CDS index products. In addition, we will discuss other forms of credit derivatives such as Collateralized Loan Obligations, which issue bonds backed by a basket of leveraged loans.
As with any derivatives course, the idea is to learn the key arbitrages between derivatives and cash markets well so that one knows when the arbitrage breaks down! Hence, the objective is to provide a balance between developing, on one hand, a sound conceptual framework and, on the other, market understanding and insight, especially with respect to liquidity and counterparty risk effects that are often so important in markets from a practitioner's standpoint. I regard both as essential to the informed practitioner and academic. We will apply the tools by studying signs of market stress during the COVID-19 crisis and how Fed interventions alleviated the market turmoil in that period. In particular, the liquidity in the markets for government bonds will become important to understand as well, especially as COVID stimulus is being withdrawn. Along the way, we will look at methods to quantify the systemic risk of the financial sector and regulatory as well as market-based stress-testing of financial firms. Finally, we will also pay some attention to the ongoing concerns around zombie lending to corporates by bond markets given the Quantitative Easing by central banks both pre-COVID and post-COVID.

FINC-GB 3320 Managing Investment Funds (3 Credits)
Typically offered occasionally
Managing Investment Funds is a capstone course that requires students to draw on their knowledge of finance as well as macroeconomics accounting competitive analysis strategy marketing and other fields to manage a million endowment fund held by New York University. In addition to honing their analytical skills by organizing all activities related to institutional asset management students gain experience in financial writing and oral presentations advancing financial decisions in a group setting and handling all of the governance and fiduciary responsibilities of a university endowment fund. The central mission of this course is for students to learn through having practical hands-on investment management experience. Because of the time requirements in formulating an investment strategy screening and reviewing prospective stocks updating the status and performance of existing positions and all of the ancillary duties connected with the operation of a real live portfolio the experiential or hands-on component consumes the bulk of class time However a related mission is for students to acquire knowledge about institutional funds management and current industry practices and trends. This more traditional learning experience comes through readings and presentations from industry professionals. The endowment funds under management operate as the Michael Price Student Investment Fund MPSIF. The Fund began in early 2000 thanks to a generous gift from Michael F Price. During its short life MPSIF has been a very popular course that helps Stern students to differentiate themselves by providing valuable experience for careers in asset management and related fields. For more detailed information about MPSIF see the website at stern.nyu.edu/~mpsif and in particular The MPSIF Guidebook that is available at the site.

FINC-GB 3353  Law and Management of Financial Services Businesses in a Changing Environment (3 Credits)

Typically offered occasionally
This course will focus on the practical aspects of counseling and managing financial institutions to deal with the changing regulatory landscape brought on by the financial crisis of 2008. We will explore the causes of the financial crisis the historical drivers of profitability at financial institutions and how DoddFrank may impact those drivers going forward. The course will not be limited to examining DoddFrank. We will often look at case studies of business strategies and crisis management and discuss whether the strategies employed by financial institutions and the advice they were given yielded optimal results. We will consider these cases in the light of the unique impact reputational risk has on financial institutions and how that impacts their ability to withstand regulatory scrutiny and proceedings and how good counsel and management is often critical to the survival of financial businesses during periods of crisis. Cases studies will also examine how to deal with conflicts of interest and how executives and counsel should think about dealing with their regulators. We will also consider the importance of culture at a financial institution and how compensation and supervisory practices should be developed to be consistent with and encourage that culture. And we will also explore what is meant by shadow banking and its impact on financial institutions. The course will use current events in addition to the syllabus. Students are strongly encouraged to read the financial news since classroom discussion will often be based on current issues which we believe provide teaching opportunities. The course will be a combination of classroom lectures and outside speakers who are experienced in fields such as financial analysis crisis management, management of financial institutions including some that failed. We expect the outside speakers will give you insights into the practical solutions which lawyers and management are called upon to provide. Occasionally we will include videos in the readings for class and for the first class students will be required to view the HBO movie Too Big To Fail.

Repeatable for additional credit: No

FINC-GB 3355  Impact Investing in Family Offices (3 Credits)

Typically offered occasionally
Investing for social and environmental impact is gaining wider acceptance within the institutional investment community. Many pension funds and endowments have sizeable holdings in environmental, social, and governance (ESG) related investments and integrate ESG strategies into their portfolios. Building on a companion course (FINC-GB.3348) that surveys the principles and techniques of impact investing, this seminar-style course offers students an opportunity to develop their knowledge of impact investing using a complementary approach. This course combines the experience of a semester-long consulting engagement focused on a live impact investing opportunity or challenge facing a family office with classroom lectures, case discussions and expert guest speakers from the impact investing field.

Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 3357  Private Investing and Wealth Management (3 Credits)

Typically offered occasionally
This is a case-based course intended to provide an in-depth conceptual and practical guide to domestic and international wealth management for high net worth individuals and families. The global market for wealth management has grown rapidly in recent decades and is likely to continue to be one of the most dynamic dimensions of the financial services sector, even as growth shifts location to new areas of wealth accumulation. Besides growth, private banking remains one of the most valuable franchises of the global financial services industry, based on key client relationships, creativity in product development, and earnings stability.

Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 3361  Entrepreneurial Finance (3 Credits)

Typically offered occasionally
This course identifies and follows the wealth creation cycle that begins with company startups passes through successive stages of various kinds of private equity financing and ends with the harvesting of the created wealth through a sale or merger or initial public offering. Emphasis is placed on how entrepreneurial firms adapt financing and financial contracts to the information asymmetry problems the high degree of uncertainty and the conflicts of interest associated with startups.

FINC-GB 3366 Operating Hedge Funds (3 Credits)
Typically offered occasionally
This course will cover critical managerial aspects and characteristics of hedge funds and the hedge fund industry. Topics considered in the course will include: (a) the legal foundations and structures of hedge funds including the primary regulations in the US and abroad, (b) operations, control administration, due diligence, and valuation issues, (c) performance evaluation and investing in hedge funds from the investors' perspective, and (d) potential changes in regulation risk management and the use of leverage. The course is designed to be a multidisciplinary general management course that focuses on practical aspects of hedge fund management related to starting and running a hedge fund. Among the course requirements, students will develop their own original strategy structure and controls for a mock hedge fund investment and present their plan to investment professionals who will critique such fund. Students in the course should develop a broad understanding of the essential knowledge one needs to launch a hedge fund successfully conditional on having a trading strategy and access to capital.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 3379 Special Seminar in Finance (3 Credits)
Typically offered occasionally
This course will cover critical managerial aspects and characteristics of hedge funds and the hedge fund industry. It will look at the legal foundations and structures of hedge funds including the primary regulations in the US and abroad that are most relevant for hedge funds. It will describe operations, control administration, due diligence, and valuation issues. Also, while explicitly not a course on hedge fund trading techniques, it will introduce a sampling of major hedge fund strategies from a general perspective so that students better understand the concept of absolute/return strategies. Moreover, we will discuss performance evaluation and investing in hedge funds from the investors' perspective as well as issues of potential changes in regulation risk management and the use of leverage. The course will touch upon ethics in the industry. It is designed to be a multifunctional course that focuses on practical aspects of hedge fund management.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 3380 Emerging Financial Markets (3 Credits)
Typically offered occasionally
The perspective in this course is that of an investment manager who may be responsible for investment portfolios at a bank, an insurance company, a pension or endowment fund, or personal trust, or a mutual fund. Emerging financial markets around the world are examined. Problems considered include political risk, currency risk, excess speculation, or market manipulation. Accounting rules and standards and performance measure comparison standards. Financial investments considered range from stocks to bonds to derivatives to real estate. Class discussion and reading focus on both the theoretical background and the practical knowledge necessary to deal effectively with the risks and opportunities that are a part of emerging financial markets.
Grading: Grad Stern Graded

FINC-GB 3388 Global Banking and Capital Markets (3 Credits)
Typically offered occasionally
This course is an analysis of the competitive performance and strategic positioning of financial institutions in multinational capital markets. Market segmentation theories are applied to markets for syndicated lending, trade finance, and project financing. Considers international aspects of raising capital in multinational, multi-regulatory settings. Examples may include mergers and acquisitions, joint venture capital projects, and government or private partnership projects.

FINC-GB 4338 Financial Econometrics (3 Credits)
Typically offered occasionally
This course focuses on Financial Econometrics which is the set of statistical tools that are most helpful in the analysis of financial markets. The course develops tools for estimating volatility and correlation of financial returns with applications to asset pricing risk management, portfolio selection and derivative pricing. Extreme Value Distributions, Copulas and Systemic Risk are topics that will be studied. The course will use accessible data sources and software and will have homework a research paper and a final exam. The ideal preparation is Econometrics I and Fin Theory I or better.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 6035 Real Estate Investment Strategy (3 Credits)
Typically offered occasionally
The course is designed students with a strong interest in real estate capital markets. Its target audience is student specializing in Real Estate, for whom this is a capstone course, but is also open to finance-oriented students who wish to gain an in-depth understanding of real estate investment analysis. Topics covered will span the real estate equity and debt markets, both public and private. The bulk of the course focuses on commercial real estate, but we will spend some time studying the housing markets. There are three major sections in the course: Structured finance and the CMBS market, REITs and Publicly-Traded Real Estate, the Private Real Estate Market. The class will contain a mixture of standard lectures, guest speakers, and case discussions. It will meet once per week for three hours to accommodate the relatively high number of outside speakers and cases in the course.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 6036 Real Estate Data Science, Artificial Intelligence, and Machine Learning (3 Credits)
Typically offered occasionally
Exponential growth in the availability of high quality real estate and real estate-related data is fueling a major shift in development, investment, and lending decision-making processes. In this highly applied course, students will be introduced to major data analysis and machine learning platforms; a wide range of public and private real estate and urban data sources; approaches to exploratory data analysis, real estate data visualization, and communication of findings; applied statistical modeling, including forecast modeling; and, emerging and prospective real estate applications for artificial intelligence and machine learning. Assessment will include case work focusing on real-world real estate decisions and coding assignments. While the data and applications for this course are principally in the real estate sector, the applied skills learned may be of interest for students across a wide range of industries.
Grading: Grad Stern Graded
Repeatable for additional credit: No

FINC-GB 6038 Real Estate Capital Markets (3 Credits)
This course introduces students to real estate securitization from both an equity and debt perspective. It analyzes alternative types of equity securitization vehicles including real estate investment trusts (REITs), commingled real estate funds (CREFs), real estate limited partnerships (RELPs), master limited partnerships (MLPs), and real estate swaps. The course also introduces students to mortgage-backed securities (MBSs) as an example of real estate debt securitization, and explores differences in their cash flows, prepayment, and default probabilities. It discusses the dynamics of mortgage prepayments and pricing the embedded call option in a mortgage, followed by real-world applications. Students explore such mortgage derivatives as mortgage pass-throughs, interest-only and principal-only strips, floaters and inverse floaters, and various types of collateralized mortgage obligations such as planned amortization classes.

**Repeatable for additional credit:** No

FINC-GB 6062 Applications in Entrepreneurial Finance: Fintech (3 Credits)  
This course examines the lifecycle of high-growth new ventures (i.e. startups), with a focus on how they are funded. We will follow a successful startup’s path from founding through the stages of new venture finance. These include developing a business plan and its financials, the core skills of valuation, the venture capital industry, and how entrepreneurs and investors realize returns. Through examples of specific companies and technologies, we will also learn about the emerging landscape of financial technology (fintech) startups. We will consider the following subsectors, where startups are either seeking to displace incumbents or sell them their services: personal finance, blockchain, equity crowdfunding, lending (peer-to-peer and AI-augmented), payments, insurance, institutional investment, and money transfer.  
**Grading:** Grad Stern Graded

**Repeatable for additional credit:** No

FINC-GB 6082 Credit Risk and Bankruptcy (3 Credits)  
The objective of the course is to provide an introduction as well as an in-depth understanding of single-name derivative products, primarily the single-name credit default swaps (CDS), as also index products, with a focus on sovereign CDS and index products. We will apply the tools by studying signs of market stress during the COVID-19 crisis and how Fed interventions alleviated the market turmoil in that period. In particular, the liquidity in the markets for government bonds will become important to understand as well. Along the way, we will look at methods to quantify the systemic risk of the financial sector and regulatory as well as market-based stress-testing of financial firms. Finally, we will also pay some attention to the ongoing concerns around zombie lending to corporates by bond markets given the central bank backstop post COVID.
