GLSP1-GC 1005 The Science of Fandom (3 Credits)

This course delivers an in-depth foundation of the aspects of the sports fan as a special category of consumer by providing students with an understanding of the underpinnings of fans' perspectives, attitudes, affinities, and even reactions to their favorite teams' successes and failures. This course begins with establishing the difference between typical consumer behavior for products and services to the sports service industry. We will delve into the science of fandom by exploring the psychology, sociology and neuroscience of fandom, review relevant academic literature pertaining to theories of social group dynamics and humans' innate drive towards community. We will also explore the psychological framework for fandom. Students will learn about fan behaviors and their economic motivations along with implications for sports economics, pricing models, ticketing packages, etc. Students will put their learning into practice through a case study where students will develop a product offering for a sports team, drawing on the insights from this course.

GLSP1-GC 1025 Globalization of Sport (3 Credits)

This course will address the intertwined relationship between globalization, sport, and development from a critical global perspective. This course highlights the extent to which contemporary sport cultures are the result of an interplay between local, regional, national, international and global forces. This is achieved by demonstrating how sport governing bodies, spectacles, practices, and products, are both expressive of local conditions, while simultaneously being influenced by the workings of global economic, political, and cultural forces. The specific aim of the course is to encourage students to consider how various international sport mechanisms are experienced as manifestations of the global-local nexus. We will explore the international character of professional and amateur sports including international competitions, league expansions beyond national boundaries, and the movement of athletes. Such a cross-cultural examination will nurture, not only a comparative understanding of various national sport cultures, but also a more nuanced and sensitive understanding of the derivation and experience of cultural difference within the era of globalization.

GLSP1-GC 1040 Sports Analytics (3 Credits)

This course is an examination of analytical tools and techniques used in Sports Business. This course provides the groundwork for the fundamental principles and key methodologies that can be applied to any sports analytics problem. The course begins by outlining the significance of complementing human insight with quantitative methods in the analysis of everyday sports. We will delve into the quantitative aspects by taking a structured approach to the use of big data and develop a systematic observation strategy. Students will learn to identify critical parameters for different sports based on guidelines, understand how to analyze and interpret patterns applying various measurement techniques, conduct statistical analyses, quantify objective relationships in the data to meaningfully increase the predictive power of forecasting tools, model various what-if scenarios, and master the art of calculating odds. The course concludes with a simulation game that will allow students to put their learning into practice, drawing on the insights from this course. The structure of the course allows for the examination of analytics in four main areas: player performance measurement, in-game decision-making, player selection/team building, and general administration including marketing, pricing, contracts, stadium management, etc. Emphasis will be placed on how the application of analytics has improved each of these areas. Students will be responsible for weekly reading assignments, which will be the basis for class discussions. Homework assignments will determine the students' understanding of the analytic techniques discussed in class. Lastly, there will be a group project due at the end of the semester. Several classes will feature guest speakers with practical experience in the field of Sports Analytics.
