

FACILITIES

Pless Center

NYU Rory Meyers College of Nursing's Muriel and Virginia Pless Center for Nursing Research was established in 1995 with the purpose of supporting the College's contribution to the scientific enterprise at NYU. The Center's goals are to provide a strong infrastructure to develop and support faculty research and scholarship and to nurture a collaborative research environment. The Pless Center provides resources for faculty research, including individual consultation, small grants for pilot studies, assistance with grant submissions, statistical support, and peer review of grant proposals.

In addition to these resources for research, there are multiple NYU collaborating centers that contribute to advancing our mission, including:

- Clinical and Translational Science Institute (CTSI) (<http://ctsi.med.nyu.edu/>)
- Comprehensive Center on Brain Aging (<http://aging.med.nyu.edu/>)
- NYU Dentistry Translational Research Center (formerly the Bluestone Center) (<https://dental.nyu.edu/research/translational-research-center.html>)
- NYU Cancer Institute (<http://www.cancer.med.nyu.edu/>)
