

SOCIAL SCIENCE (MINOR)

Program Description

Social scientists study human interactions among individuals, families, communities, nations, and the built and natural environments. Using a range of analytical, interpretive, and experimental tools from anthropology, economics, epidemiology, political science, psychology and sociology, social scientists seek to understand conflict and cooperation, epidemics of disease and poverty, social organization and social change, kinship and belonging, human development, systems of exchange, and other enduring questions at the center of our shared humanity.

Students who complete the Social Science major at NYU Shanghai will be prepared to pursue careers and advanced study in fields as diverse as anthropology, business, development, economics, education, environmental studies, journalism, law, psychology, political science, public health, public service, sociology, and social policy. The major offers students a unique opportunity to explore broad areas of social science research and thought, while also allowing a concentration in one of multiple tracks within the major. The Social Science major encourages interdisciplinary inquiry into the complex problems of our contemporary world and the cross-disciplinary exchange that is at the heart of many of the most interesting advances in social science research today.

Social Science majors at NYU Shanghai develop competence in a variety of research tools in two methods courses and complete two interdisciplinary core courses unique to the major. Social Science majors select two foundational courses in the social science disciplines, and three focus courses in one track to deepen their intellectual specialization (tracks include: anthropology, environmental studies, global public health, international relations, political economy, political science, psychology, sociology, or urban studies)¹. China – its peoples and politics – is an important focus for teaching and learning in the major, but the Social Science Area is purposefully global in perspective and heterogeneous in the methodological and analytical scope of its course offerings. Social Science majors complete an independent research project as a senior year capstone.

Program Requirements

Course	Title	Credits
Select one Social Science Methods course		4
Select three courses from the Social Science Foundations, Core, or Focus courses.		12
Total Credits		16

Social Science Methods Courses

Code	Title	Credits
BUSF-SHU 101	Statistics for Business and Economics	4
BUSF-SHU 200E	Network Analytics	4
BUSF-SHU 310	Data Science for Social and Information Networks	4
CCSF-SHU 127	Introduction to Policy Analysis II	4
ECON-SHU 201	Math for Economists	4
ECON-SHU 213	Causal Inference in the Social Sciences	4
ECON-SHU 216	Introduction to Game Theory	4
ECON-SHU 416	Game Theory: Advanced Applications	4
